Hiring Team

MedHealth

Dear Hiring Team,

I am applying for the IT Service Desk Analyst role at MedHealth. The hybrid arrangement and MedHealth's scale - 4,000 professionals helping people achieve better health and employment outcomes - is the kind of environment I want to grow in, and my technical support background and in-progress cybersecurity degree give me a foundation to contribute from day one.

At Ozb Group (RMA), I spent nearly two years diagnosing hardware faults, maintaining accurate incident records, escalating complex cases, and training new team members on technical procedures. The work required the same discipline a service desk demands: systematic fault isolation, structured documentation, and clear communication under volume. While I have not worked in a formal ticketing system such as Freshworks, I am actively self-studying service desk workflows and plan to sit the ITIL Foundation certification within my first 90 days of joining a structured IT team.

My Bachelor of Cybersecurity at Melbourne Institute of Technology (expected July 2026) covers networking fundamentals, Windows environments, Active Directory, and security principles. I have used lab environments to practise user account management and directory concepts. O365 is part of my day-to-day study and coursework toolset. I am honest about the gap between my current experience and a fully proficient service desk analyst - but I learn quickly, I document carefully, and I bring genuine curiosity about how IT systems work rather than just how to follow scripts.

I would welcome the chance to speak with your team about how I can grow into this role. Thank you for your time.

Sincerely,

Pratik Dhami
