Hiring Manager
Sigma Healthcare
Preston, VIC

Dear Hiring Manager,

I am writing to apply for the IT Support Officer role at Sigma Healthcare. The opportunity to provide hands-on technical support within a major healthcare organisation — and to contribute directly to cybersecurity and system maintenance alongside core support duties — is a strong match for both my experience and the direction I am building my career in.

I bring two years of technical support experience from my role as a Technical Support Associate at Ozb Group (RMA), where I provided first-line phone and in-person support across hardware, software, and connectivity issues. I set up user accounts and devices, managed support tickets through to resolution, escalated complex issues with clear documentation, and trained new staff on technical systems and processes. Throughout, my priority was making sure every user felt genuinely helped — not just technically resolved.

I am completing a Bachelor of Cybersecurity at Melbourne Institute of Technology, graduating in July 2026. My studies cover networking, Windows systems, vulnerability management, incident response, and security fundamentals — meaning I can contribute not only to day-to-day IT support but also to Sigma Healthcare's cybersecurity and system maintenance responsibilities from day one. I plan to pursue CompTIA A+ and Microsoft certifications post-graduation and welcome the professional development opportunities Sigma Healthcare offers.

I am available to commence from August 2026 following the completion of my degree. I am genuinely motivated to build a long-term IT career within a healthcare organisation where technology plays a direct role in supporting patient outcomes and business operations.

Thank you for your time and consideration. I would welcome the opportunity to discuss my application further.

Kind regards,

Pratik Dhami
